

Project Part #0 - Preparing the scene

Functional Programming

Anders Kalhauge

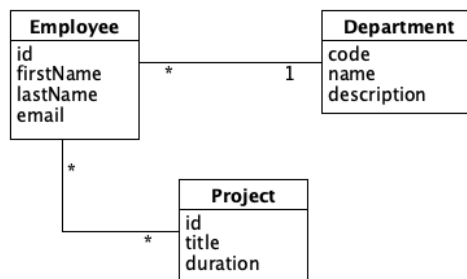

Spring 2021

This is the initial part of the project for Functional Programming.

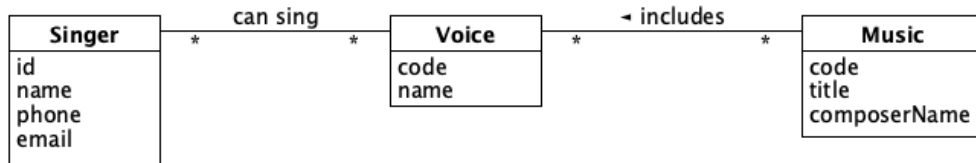

The model

Select a domain for the application. It should at least have a collection of item and preferably also a many-to-many and/or a many-to-many.

You could use one of the following for inspiration:

or

Create an endpoint in your favourite language. The protocol used should be REST with JSON.

Hand in

A link to the github repository. In groups on Peergrade Monday March 17th no later than 13:00.
